

2015 INDUSTRY DAY SERIES

FACILITIES MAINTENANCE & MANAGEMENT

Utility Management Program

What we do

Provide engineering and technical services to support and maintain overseas facilities with the goal of ensuring cost-effective, reliable, and maintainable building operations and utilities.

Products and Services:

- Engineering assistance and project surveys
- Utility rate and metering surveys
- Office and residential generators
- Power conditioning and quality (AVR/UPS) equipment
- Operations and utility improvements
- Medium voltage assistance

Funding

Projects are funded based on a priority scoring of all projects worldwide. There is funding to perform assessments and surveys, which are used to promote projects and score for future funding. The Utility management program is allotted \$5M for projects as a part of OBO's annual maintenance appropriation.

How to get work with us

The Utility Management Program uses an Indefinite Delivery Indefinite Quantity (IDIQ) contract. We currently have 5 IDIQ contracts that were awarded in September 2012. The IDIQ's are one year contracts with 4 additional option years. They will be up for re-solicitation in September 2016.
